

placing a transfer member in contact with an external portion of an individual so as to obtain a transfer image on the transfer member,

wherein the transfer image is present on the transfer member after the transfer member and the external portion are out of contact with one another,

wherein the transfer image is not a fingerprint or fingerprints, and

wherein the external portion that the transfer member is placed in contact with does not include a tooth or teeth; and

scanning the transfer image with an optical image scanner to obtain scanned image data for an image representative of at least one characteristic of

the external body portion, and/or

at least one product applied to the external body portion.

21. (Amended) The process of claim 1, wherein the external portion includes at least one of the skin of the individual, at least one strand of hair of the individual, at least one fingernail of the individual, and at least one toe nail of the individual.

63. (New) A process for acquiring scanned image data relating to an external body portion and/or a product applied to the external body portion, the process comprising:

placing a transfer member in contact with an external portion of an individual so as to obtain a transfer image on the transfer member,

wherein the transfer image is present on the transfer member after the transfer member and the external portion are out of contact with one another, and
